Editorial Policy Statement

Archäologische Mitteilungen aus Iran und Turan (AMIT) is an annual peer-reviewed interdisciplinary academic journal in continuous publication since 1996, published by the Teheran Branch of the Eurasia Department of the German Archaeological Institute (Außenstelle Teheran der Eurasien-Abteilung des Deutschen Archäologischen Instituts [EADAI]). It is the continuation of the journal "Archäologische Mitteilungen aus Iran" originally edited by Ernst Herzfeld 1929-1938 and renewed as "Archäologische Mitteilungen aus Iran, Neue Folge" since from 1968 to 1995, which was published by the German Archaeological Institute, Teheran Branch.

The journal is devoted to the archaeology of Iran and Turan in the widest sense, including Iran, the Caucasus, Central Asia, Afghanistan, Pakistan and India, as well as China and Japan. All periods of Prehistory are covered, from the Palaeolithic to the Middle Ages. Studies on modern history, ethnography, archaeometallurgy, bioarchaeology, environmental history, geoarchaeology and other interdisciplinary topics are accepted whenever relevant to archaeology. Articles are published in German, English or French. They always have an English summary, as well as one in Russian (when concerning the former Soviet Union) or Farsi (when concerning Iran). Summaries in other languages may be included at the authors’ requests.

The aim of AMIT is to offer a specialized periodical in which the members of the Eurasia Department of the German Archaeological Institute and scientists from the entire international community can publish and discuss the archaeology, culture and history of the named regions in a forum controlled by peer review. Submissions should essentially be oriented toward evidence-based contributions presenting original research results. This also includes analytical reviews of literature presenting recent discoveries, reviews examining the latest actual questions of archaeology, as well as information regarding new publications (book reviews) and the debates surrounding them.

The results published in our journal are hopefully met with interest among international colleagues. We invite contributions from all those who have something to communicate and do so professionally and scientifically.
